Experiment No. 7

Apply Dimensionality Reduction on Adult Census Income

Dataset and analyze the performance of the model

Date of Performance: 12/10/23

Date of Submission: 16/10/23

Vidyavardhini's College of Engineering & Technology

Department of Computer Engineering

Aim: Apply Dimensionality Reduction on Adult Census Income Dataset and analyze the

performance of the model.

Objective: Able to perform various feature engineering tasks, perform dimetionality reduction

on the given dataset and maximize the accuracy, Precision, Recall, F1 score.

Theory:

In machine learning classification problems, there are often too many factors on the basis of

which the final classification is done. These factors are basically variables called features. The

higher the number of features, the harder it gets to visualize the training set and then work on

it. Sometimes, most of these features are correlated, and hence redundant. This is where

dimensionality reduction algorithms come into play. Dimensionality reduction is the process

of reducing the number of random variables under consideration, by obtaining a set of principal

variables. It can be divided into feature selection and feature extraction.

Dataset:

Predict whether income exceeds \$50K/yr based on census data. Also known as "Adult" dataset.

Attribute Information:

Listing of attributes:

>50K, <=50K.

age: continuous.

workclass: Private, Self-emp-not-inc, Self-emp-inc, Federal-gov, Local-gov, State-gov,

Without-pay, Never-worked.

fnlwgt: continuous.

Conclusion:

- 1. The Accuracy score obtained by applying principal component analysis on the testing data is 0.82 which means our model is 82% accurate on the testing data.
- 2. Precision measures the accuracy of the positive predictions and the precision score obtained by our model is 0.84
- 3. Recall measures the ability of the model to correctly identify all relevant instances and the Recall score obtained by our model is 0.94
- 4. F1-score is the harmonic mean of precision and recall and provides a balance between the 2 metrics and the F1-score obtained by our model is 0.89
